“It’s a remarkable service that I wish I had known about sooner.”
— Ellen of Andover

“It’s easier to face the day! They have met my needs and have been very friendly and understanding.”
— Ian of Concord
WHO WE ARE

Future In Sight is a nonprofit organization that provides vision rehabilitation services for all ages. We offer low vision services from our occupational therapists and low vision therapists, vision rehabilitation therapy, orientation & mobility training, educational services, counseling services, technology training, and more! Our volunteers are also available for client transportation and home visits.

Vision services are provided by our licensed and certified professionals. The hallmark of our rehabilitation program is the one-on-one training we provide. We go where clients go - wherever our help is needed the most! Everyone’s vision loss is different, so our services are personalized to match our client’s needs.

“I can get around with more confidence, thanks to this very helpful and caring organization.”

— Linda of Peterborough

WHAT WE DO

SOCIAL WORK SERVICES
Our social workers meet with each client to develop a plan to meet their needs, can provide counseling to help with the adjustment process, and will make referrals to appropriate community services, support groups and recreational activities.

LOW VISION SERVICES
Instruction is provided by our therapists to those who are partially sighted in the effective use of their remaining vision, including the evaluation and training in the use of low vision aids and assistive technology. Services are provided by occupational therapists, low vision therapists, and eye care professionals.

REHABILITATION THERAPY
Our therapists help teach skills that enable people with vision loss to have productive and rewarding lives at home, in the workplace or in the community. We focus on areas that enhance independence, such as personal safety, household and financial management, and communication.

ORIENTATION & MOBILITY TRAINING
Our mobility specialists provide instruction and training that allows an individual to develop safe and independent travel skills in their home, neighborhood and workplace.

EDUCATIONAL SERVICES
The education staff assists children, from birth to 21 years old, who experience vision loss or blindness. Classroom instruction is provided by our teachers of students with visual impairments, whose services may also include independent living skills and assistive technology training. Independent travel skills are taught by our orientations & mobility specialists.

TECHNOLOGY PRODUCTS & SERVICES
Assessments to identify necessary devices, and adequate training to optimize the use of technology, are provided by our skilled staff to allow clients to utilize technology within their daily activities.

GROUP PROGRAMS
Instructional and recreational programs are organized throughout the state to provide an opportunity for clients to participate in their communities with groups of their peers for learning and socialization.

HOW WE HELP

• Future In Sight works closely with your doctors for complete client care.
• Our licensed and certified specialists assist clients in maximizing any remaining vision you may have.
• Services from our occupational therapists are often covered by Medicare, Medicaid, and private insurance plans.
• As a nonprofit organization, we receive donations that allow us to provide the services and devices our clients need.
• We can match clients with our volunteers who can offer vital support as community visitors and drivers.

“I can still read print, and I am grateful for that. They do good work and are very interested in their clients.”

— Sheila of Concord
