ABOUT US
Serving NH since 1912, Future In Sight is dedicated to providing services for individuals who are blind or visually impaired. Donations that we receive allow us to provide our services and devices for our client’s needs.

We work closely with your doctors to provide complete care, and our occupational therapists services are often covered by Medicare, Medicaid, and private insurance.

If you struggle with vision loss from conditions including:

- Macular Degeneration
- Glaucoma
- Cataract
- Diabetic Retinopathy

We can help.

ADULT SERVICES
We Can Help
WE HELP YOU IN YOUR HOME

When you call Future In Sight, you’ll talk with a member of our Social Work team who will learn about you, your vision loss, and schedule time to visit you in your home to fully understand your needs.

Our licensed and certified Low Vision and Rehabilitation professionals will assist you so that you can maximize any remaining vision you may have.

With adaptive aids and devices, they can make simple enhancements in your home that will make food preparation and cooking easier, make reading or watching TV more enjoyable, and relocate items that could be trip and fall hazards.

“*It’s a remarkable service that I wish I had known about sooner.*”
- Ellen of Andover

Everyone’s vision loss is different. The hallmark of our vision rehabilitation program is the one-on-one training we provide.

**Occupational Therapists** can work with you intensively to provide instruction about modifying daily activities to reduce limitations that your vision loss causes.

If you are newly blinded or have deteriorating vision, our trained **Orientation & Mobility Specialists** provide instruction and training that help you to safely navigate your environment with confidence.

Instruction techniques include working with another person who is a sighted guide, as well as learning to use a white cane and **Assistive Technology** to build up independent travel skills at home, at work, or in the community.

Throughout the year, we offer recreational, fun **group activities** at various locations around the state.

Activities include adaptive sewing, exposure to music and the arts and various outings to experience all that New Hampshire’s parks, trails and nature preserves have to offer.

With a diagnosis of profound vision loss, there is a grieving process that occurs. Reaching out to others who understand is very helpful. **Peer Support Groups** provide that opportunity.
